quarterly exec report q2 fy26

Prepared by: ops + growth + analytics
Internal only pls

Reporting window: Apr 2026 - Jun 2026

Overview

Q2 was honestly one of the strongest growth quarters we've had so far, mostly because of the success of *Galaxy Burn* and the APAC creator campaigns.

Subscriber growth was much higher than expected in India + Indonesia and mobile watch activity kept increasing basically the entire quarter.

Main things that went well:

- sci-fi releases performed really well
- creator campaigns did better than standard ads
- mobile engagement way up
- people stayed longer on platform after recommendation update

Things that still need work:

- Europe numbers weak again
- infra costs rising
- subtitle complaints not fully fixed
- analytics attribution still inconsistent in some dashboards

company metrics

Metric	Q1 FY26	Q2 FY26
Subscribers	3.1M	4.4M
Monthly Active Users	2.2M	3.5M

Metric	Q1 FY26	Q2 FY26
Avg Watch Time	12.9 hrs	17.2 hrs
Churn	8.1%	6.4%
Mobile Share	61%	73%

Growth mostly came from APAC and social traffic.

Need finance team to confirm final infra cost numbers btw.

regional breakdown

APAC

Best performing region by far.

India + Indonesia numbers were kind of insane compared to forecast.

Main growth reasons:

- creator clips on TikTok/Reels
- Galaxy Burn launch
- better subtitle support
- mobile-first users sharing clips online

Most active viewing hours: 8PM - 1AM local time

Completion rates for sci-fi content were way above average.

North America

Pretty stable quarter overall.

Thriller content still doing well but younger users are watching shorter sessions now compared to earlier this year.

Smart TV engagement stayed solid.

Europe

still rough honestly.

Main problems:

- CAC too high
- localization rollout delayed again
- generic ads underperformed
- lower creator engagement than expected

Need marketing + content teams aligned before Q3 campaigns start.

infrastructure notes

Platform uptime stayed mostly stable except during the *Galaxy Burn finale weekend* where recommendation latency spiked for around 2 hrs.

Infra team notes:

- recommendation queue overloaded
- subtitle rendering issue on some older Android devices
- APAC traffic exceeded expected peak by ~31%

No major security incidents reported.

content performance

top titles this quarter

title	genre	avg completion	main region
Galaxy Burn	SciFi	84%	APAC
Shadow Circuit	Thriller	73%	North America
HarborLine	Drama	66%	Europe
Last Orbit	Sci-Fi	78%	APAC

Galaxy Burn basically carried Q2 growth.

A lot of users came in through clips/memes from creators and then stayed for the full season.

recommendation system update

recommendation model v2.4 deployed in May.

Changes included:

- better mobile ranking
- shorter session adaptation
- regional trending boosts
- improved sci-fi recommendations

Results looked good overall:

- +11% watch time
- lower homepage exits
- more episode continuation clicks

Search relevance still feels weird sometimes though according to support feedback.

marketing overview

Main campaign types:

- creator partnerships
- short-form clips
- meme campaigns
- mobile app promos
- referral pushes

Campaign ROI

Region	Spend	ROI
APAC	\$2.8M	4.7x
NA	\$1.9M	2.9x
Europe	\$1.7M	1.4x

Europe performance numbers may shift slightly after attribution cleanup.

There are currently differences between:

- ads dashboard
- finance sheet
- growth reporting export

Analytics team still reconciling.

retention trends

Users who watched at least:

- 3 sci-fi episodes
- enabled subtitles
- watched on multiple days

had much better retention.

Serialized content clearly outperforming standalone movies rn.

quick notes from growth sync

- Need better onboarding flow
 - subtitle QA still inconsistent
 - APAC creators asking for longer contracts
 - someone pls fix duplicate campaign naming before next quarter
 - recommendation explainability request came up again
-

risks going into q3

infra scaling

Infra spend increasing faster than forecast because:

- more HD streaming
- higher APAC traffic
- recommendation compute costs
- creator video uploads increasing storage usage

Engineering suggested:

- better caching
 - lower-cost archive storage
 - CDN optimization
-

content risks

Things we're watching:

- sci-fi fatigue risk if we oversaturate
- weaker engagement outside serialized content
- higher expectations after Galaxy Burn success

Need stronger non-sci-fi lineup before Q4 probably.

compliance / governance stuff

Current internal AI tooling still restricted from:

- direct db access
- raw customer exports
- payment data visibility

Most retrieval flows currently go through the analytics API layer.

Need clearer policy docs though because teams keep asking different questions around internal AI usage.

q3 priorities

- keep APAC growth momentum
 - improve Europe performance
 - reduce infra cost spikes
 - improve subtitle quality
 - better recommendation transparency
 - fix attribution inconsistencies
-

final comments

Overall Q2 was way stronger than expected and the company is growing faster than earlier forecasts predicted.

Biggest positives:

- mobile growth
- creator campaigns
- sci-fi retention
- APAC expansion

Main operational concerns:

- scaling infra properly
- attribution cleanup
- governance maturity
- keeping content quality consistent
