audience behaviour report q2 fy26

Prepared by: analytics + product insights Internal only export
version 2 maybe

overview

Q2 viewer engagement increased a LOT compared to Q1, mostly because of:

- Galaxy Burn
- creator-driven traffic
- mobile viewing growth
- recommendation updates

Most users are now watching primarily on mobile instead of desktop or TV. APAC continues carrying most engagement growth rn.

global engagement numbers

Metric	Q1	Q2
avg weekly watch hrs	3.9	5.8
avg session duration	41 min	57 min
mobile watch share	58%	73%
returning viewers	61%	72%
avg completion rate	54%	67%

Some dashboard exports showed slightly diff numbers depending on timezone settings. analytics still reconciling.

peak viewing times

Region	Most Active Hours
APAC	8PM - 1AM
North America	7PM - 11PM
Europe	6PM - 10PM
LATAM	8PM - midnight

Late-night viewers generally had:

- longer sessions
 - higher completion
 - better retention
 - more binge behavior
-

device usage

Device	Share
Mobile	73%
Smart TV	17%
Desktop	7%
Tablet	3%

Desktop traffic keeps dropping almost every quarter. One PM described desktop engagement as “basically background noise now”.

content trends

Top performing genres:

- Sci-Fi
- Thriller
- Fantasy

Reality content still underperforming pretty hard.

Sci-fi viewers:

- binge more often
 - retain longer
 - engage more with recommendations
 - share clips online more frequently
-

subtitle impact

Subtitle usage strongly correlated with:

- higher retention
- lower drop-off
- better episode completion

Localized subtitles seem especially important in:

- Indonesia
- India
- Philippines

Subtitle complaints still exist though. especially sync issues.

APAC behavior

APAC users showed:

- highest mobile usage
- strongest binge behavior
- most creator-driven engagement
- longest average nightly sessions

Galaxy Burn engagement numbers were honestly kind of ridiculous compared to forecasts.

A lot of traffic came from:

- edits
- memes
- theory videos
- reaction clips

North America

NA behavior stayed relatively stable.

Notable trends:

- stronger smart TV usage
- thriller content performing well
- slightly shorter session durations among younger users

Premium subscribers still retain much better than free-trial users.

Europe

Europe engagement still weaker than expected.

Possible reasons:

- weaker localization
- lower creator presence
- generic promo campaigns
- slower subtitle rollout

Completion rates for localized trailers were noticeably higher than standard versions.

binge watching

Common binge patterns:

- episodes under 50 mins
- cliffhanger endings
- autoplay enabled
- recommendations immediately after playback

Users who watched 3+ episodes in one session had much better retention overall.

recommendation system

Recommendation model update in May improved:

- homepage clicks
- episode continuation
- watch duration

Still some complaints though:

- "same recommendations repeating"
- "homepage too sci-fi heavy"
- occasional weird category mixing

Search relevance feedback mixed too.

viewer segments

segment A

Heavy mobile binge users

Usually:

- ages 18-29
- active late at night
- creator/social traffic heavy
- strong sci-fi engagement

Highest retention segment by far.

segment B

Casual viewers

Characteristics:

- shorter sessions
- lower completion
- weaker onboarding engagement

Most likely to churn quickly.

retention signals

Things linked to better retention:

- subtitles enabled
- watching multiple days/week
- recommendation interaction
- serialized content
- mobile notifications enabled

Things linked to higher churn:

- incomplete episodes
- low homepage engagement
- weak recommendation relevance
- long gaps between sessions

content discovery

Main discovery sources:

- homepage recommendations
- creator clips
- push notifications
- trending sections
- search

Search traffic actually lower than expected overall. Most users finding content through recommendations/social instead.

operational weirdness

Some analytics issues this quarter:

- duplicate watch events during traffic spikes
- partial gaps in creator attribution
- timezone inconsistencies in exports
- delayed nightly processing jobs

One pipeline failed after a malformed csv got uploaded into the reporting bucket. fixed after rollback.

product recommendations

Things product team should focus on:

- improve recommendation diversity
 - reduce repeated homepage rows
 - improve subtitle quality
 - optimize low-end Android playback
 - better onboarding for casual viewers
-

closing notes

Q2 engagement growth was significantly stronger than forecast, mainly due to mobile-first viewing and creator-driven sci-fi engagement.

Biggest strengths:

- APAC growth
- binge behavior
- creator ecosystem
- recommendation engagement

Main concerns:

- overdependence on one franchise
- subtitle quality consistency
- analytics reliability during spikes
- recommendation repetition
