q2 campaign summary fy26

Prepared by: growth + marketing internal use only version: maybe final

campaign overview

Q2 campaigns performed way better than expected in APAC, mostly because short-form creator content around *Galaxy Burn* spread pretty aggressively across TikTok + Reels. Europe still underperformed again. Main campaign focus this quarter:

- creator collabs
- short video promos
- mobile installs
- referral pushes
- meme marketing
- regional trailer edits

We spent more than originally planned because APAC campaigns kept scaling well so budgets got expanded mid-quarter. finance still verifying final spend totals btw.

regional campaign results

Region	Spend	New Subs	ROI
APAC	\$2.8M	1.1M	4.7x
North America	\$1.9M	410K	2.9x
Europe	\$1.7M	150K	1.4x
LATAM	\$1.1M	280K	2.2x
Numbers between dashboard exports still slightly inconsistent.			

top campaign

"enter the burn"

Platforms used:

- TikTok
- Instagram Reels
- YouTube Shorts

Main idea was basically:

- creators reacting to episodes
- short clips
- fan theories
- meme edits
- countdown posts before finale

Honestly this campaign kinda blew up unexpectedly.

campaign metrics

Metric	Value
Impressions	218M
CTR	14.1%
Conversion Rate	17-18% approx

Metric	Value
New Subs	640K
Avg CAC	lower than expected

Attribution model still messy for creator links though. Some conversions are probably being double-counted across mobile + web. Need analytics cleanup before investor deck gets finalized.

APAC performance notes

Best regions:

- India
- Indonesia
- Philippines

Main reasons campaigns worked:

- mobile-first audience
- creators posting late night
- sci-fi hype
- localized subtitles
- meme sharing

Most engagement spikes happened after episode releases between 9PM - 1AM.

Europe problems

Europe campaigns still struggling despite decent spend.

Issues:

- generic ads performed badly
- localization delayed again
- creator partnerships too small
- trailers apparently felt "too globalized" according to feedback

Need regional creative team involvement earlier next quarter.

campaign channel performance

Platform	performance
TikTok	very strong
Reels	strong
YouTube Shorts	strong
Google Display	weak
Desktop Banner Ads	bad honestly

Desktop campaigns performed worse than expected across basically all regions. Mobile-first users carried most acquisition growth this quarter.

creator partnerships

Creator-led campaigns clearly outperformed traditional ads.

Best performing content:

- reaction clips
- ending theories
- short edits
- "episode recap" videos

A few creators generated conversion spikes much higher than projected.

One creator campaign in Indonesia generated:

- 11M views
- 4.8% direct install rate
- unusually high retention

growth team still investigating why retention was so good there.

retention impact

Users acquired from creator campaigns retained much better than users from display ads.

Source	30 Day Retention
Creator Campaigns	79%
Paid Display	52%
Referral Links	74%

Recommendation system probably helped a lot after onboarding.

operational issues

Things that caused reporting confusion this quarter:

- duplicate campaign naming
- attribution overlap
- manually edited spreadsheets
- export mismatches between tools
- regional timezone inconsistencies

At one point APAC spend got duplicated in one dashboard because someone merged the wrong csv. fixed now i think.

notes from marketing sync

- "Galaxy Burn" memes carried harder than expected
- Europe creative felt too corporate
- need better onboarding after ad clicks
- subtitles improved retention a lot
- creator campaigns > traditional ads rn

someone also mentioned testing Discord creator communities next quarter.

attribution issues

Current attribution system still has gaps:

- cross-device tracking incomplete
- referral persistence inconsistent
- mobile app install attribution delayed sometimes
- creator codes reused incorrectly in some campaigns

Analytics engineering already working on fixes.

infra + analytics updates

Changes deployed this quarter:

- centralized reporting dashboard
- faster campaign export jobs
- automated creator tracking
- nightly analytics sync jobs

Reporting latency dropped from ~11 hrs to around ~4 hrs after updates. Still occasional failures during traffic spikes though.

compliance notes

No major compliance issues reported.

Current policy:

- customer exports restricted
- payment info hidden from analytics dashboards
- AI tooling blocked from raw subscriber data

Need clearer internal docs because different teams are interpreting rules differently rn.

Q3 recommendations

APAC

- increase creator budget
- expand local language campaigns
- more late-night release events

Europe

- stop relying so much on generic display ads
- use regional creators earlier
- better trailer localization

Product + Growth

- improve onboarding after installs
- fix attribution inconsistencies
- reduce app signup friction

final thoughts

Overall Q2 campaigns massively outperformed expectations in APAC and mobile-first growth continues to drive most subscriber acquisition.

Main strengths:

- creator campaigns
- short-form content
- sci-fi engagement
- mobile traffic

Main problems:

- attribution reliability
- Europe performance
- operational reporting consistency
- campaign naming chaos

Prepared by: growth + marketing team
